I have been using Photoshop since version 8.0 in 1998 so it was a pleasant trip down memory lane when I upgraded to CS6. It is the best PS program ever released. I have written a book, designed a feature film, written dozens of articles for magazines and a few books. I have produced my own photography since 1988 and have been doing a lot of design in the last 5 years. I like the layout of new PS. I do find that it is getting slower and slower but they have improved the "choose tools" dialog. They really should let you add and remove tools. It will save your life in a hurry. So here are some other ideas about the new features in PS CS6: 1) If you have a good reason to use both PS & LR, then by all means use the new version that can use both in some capacity. It's also true that us older users appreciate these upgrades. 2) Keep an eye out for the ability to create layers in the Layer Panel and the ability to move them. This is the missing feature that I have been begging for. These are important features that essentially make up some of the most significant new Photoshop releases in the last 20 years. 3) Adobe Cloud Drive. A new server that takes a copy of your projects, and your workflow. This is a heavy duty tool that should pass for a Web Server. If you use Dropbox, then it will be too similar because they serve the same purpose. With Cloud Drive, you can add files into a "folder" and they will be preserved for anywhere in the world with a web browser. It's perfect for those that want to keep track of their shots, and their settings, and also want to give them to their clients on a laptop or mobile device.

It was this experience with Photoshop that really motivated me to start working on designing a new versatile web app for the web. This made me realize that given the right canvas, the web is ready for a powerful creative tool to supercharge your workflow. Remember when you first started web development? I know I did. If you have not been following my work on Adobe Bridge, you might be

surprised to see it as the first step in my workflow now.With Bridge, the original vision of the Creative Cloud, I started to make it possible for Photoshop to come to the browser. That meant that Photoshop would be able to leverage the existing creative community's enormous repository of work as a platform for experimentation. With Adobe Photoshop running in the browser, I was able to expose web development's built-in tools like canvas, canvas animations, canvas image filters, and creative tools for the web to kickstart the creative process. While the browser has always been powerful for experimentation and sharing, it has been lacking in these areas. This is why Adobe Photoshop has been an important step forward in a powerful creative application coming to the browser. Since Photoshop can be run natively in Mac and Windows, a web app running in the browser cannot leverage native tool support. However, the range of tools that work across all platforms brings backwards-compatibility for the native applications, which was a top priority so users could keep their existing workflows. 933d7f57e6
