First, there is the quick selection tool. It's a selection tool designed for quick selections of any kind and a great alternative to the magic wand tools. It's made of several tools so that you can select any shape or type of area. The quick selection tool has few unique settings to differentiate it from other tools (thickness, opacity, etc.) and generally comes pre-set. We'll use it much time as a tool to paint, edit, or cut out any other areas of your image. The paint bucket tool is another option when trying to quickly cover an area or a long stretch of an image. The paint bucket tool brings more precision to painting, helping you better outline or create smooth, even tones. For the occasional painter, the paint bucket tool is exactly where they should begin. The eraser tool can be coupled with the paint bucket tool for a great paint-free alternative. It's also a pretty versatile clipping tool since it allows you to create borders for transparent linework or trim pieces on your photo. Its black border color is very useful for keeping unwanted areas within your painting layers. The pen tool is yet another fast and useful means of dealing with large areas at once. The pen tool is responsible for inscribing or drawing curves and lines on your image without the need of a retouching tool. The crop tool is very powerful and widely used, whether it's to crop an image for its whole composition, to help reduce the size of the highest resolution images within a design, to simply clean up the photo within the frame or to help reduce the size of your photo without altering or cutting it. The crop tool is a direct way of explaining the crop tool and in many cases, it's impossible to Photoshop without it.
