How many times have you seen a minor change in your image that turns it into something totally different? Photoshop's new Content Aware Fill feature will surpass all of us who can't use the right fill sliders. You can select any area on your image, choose the new feature and Photoshop will change the rest of that area so that its color, lighting, proportion, pattern and texture match that of the area selected. The basic version is almost too limited to use in most cases, where you could use the costlier professional version, which is a lot much better. The main reason why we made this choice in the first place and said it is because of the new simplified features of the product. You may find that some of the features you've come to love are already available in the Basic version. You can't from your PC and Mac and get Photoshop CC 2021 and there are a few limitations. However, you could access all the great effects of the pro version and experience the improved speed thanks to faster image loading time and a streamlined UI. Moreover, when you're using both apps, the footprint when not in use will be smaller and you won't have to buy a license for the apps which is good news for everyone. Also, the few limitations need to be mentioned is that you are only able to use your free Adobe Creative Cloud sign-in through your web browser within 12 hours and you are not able to use the apps on desktops, mobile devices, and tablets. This is to ensure that you access the apps on only

computers which is mandatory for any subscription that Adobe offers.
