Out of the box, the iPad can quickly stow away a decent amount for a tablet. Of course, I spent a lot of time customizing and arranging my collection, but the overall picture was clear for me: the iPad Pro is my #1 contender for tablet portable PC. Both the iPad and the Pixel fill the need for a true artist's tablet. While it's certainly true that all these devices were designed for professionals, I think they're so beneficial for a different reason: the designers behind them have developed a taste for drawing and painting on tablet devices. It's a trend that I think will play out for designers for a long time. Adobe used our *PCMag.com* parenting features to create a fun, minor diversion that illustrates the kind of features I'd expect from tablet computers. The app's ability to simulate changing your kid's name gives you insight into some of the smaller parents out there. Who knew that the name change stage would be so interesting? I certainly didn't. One of the most interesting aspects to the iPad Pro is that it has a powerful processor running iOS. The Apple A9X in the iPad Pro is more powerful than anything out there in the notebook world. Its ability to process all-new layers in Photoshop simultaneously is what really attracts me here. With Photoshop, the iPad is the ideal creative platform. It makes sense that Apple would want a tablet to do what you can't do in your lap, especially when you're on a tight deadline.
