As you may have guessed, Adobe has released a software package similar to Photoshop called Adobe Photoshop Elements. Photoshop Elements is a simple and easy to use photo editing software that allows you to edit images, create collages, and much more. This software is great for beginners who just want to create some simple collages or edit their own pictures. For instance, Elements is great for taking pictures of your family members and getting them to pose for you. Then, you can choose which pictures you want to keep, and use Photoshop Elements to enhance those pictures. Another great feature of Elements is that it allows you to save your work to your computer which can then be exported to other applications - such as PDFs

Now I download all of my images from the Web directly to my computer. I'm not doing it the first time because I don't want to deal with the software yet, but right after first accessing any new images, I download them. In fact, I usually work with cloud storage in one way or another, and it's natural to me. I also edit locally for a while to get a sense of the compositional, color, and monochrome qualities of the images, as well as how I'd like to crop them. I think the main reason I'm doing it is to keep drives full of Windows 10 clean – I've got frequent freezes on my system, so I don't want to store a lot of image files on the system SSD. What's the appeal of cloud storage? Quite simply, it's safe. The images are stored on your hard drive in my case, but they're still local. That means there's no cloud-based storage facility that's the target of hackers or malicious software. Of course, we have to consider the exact way images are stored on the cloud. If images are being uploaded in the background by a service like Cloudinary, that's a potential problem. If an organization or individual offers Premium storage that's faster or more responsive, that's a good thing. However, if images are being stored without a good scheme for knowing what you have and what you don't have access to, you can expose yourself to security risks. That means backing up each time to Access, Flickr, or any of the other services we use. However, most of us don't get much shooting done on weekends, and shouldn't be uploading images from those. Hence the images I usually access are recent images from social media and my own images. I do occasionally get a few SD Cards that are an earlier set from a photo shoot. Maybe I want to take some better ones.
